

## CONTEXT

This was actually something we came across while building a site for a client. It was developed on hubspot with a different twist but it's good to know if you can do something like this in HTML, CSS and Javascript only.

## RESOURCES

- <https://getbootstrap.com/>
- Figma design:  
<https://www.figma.com/file/VRbuHBkOmoUuuB2VZ16eBP/Dev-test?node-id=957%3A301>

## WHAT NEEDS TO BE DONE

Build a page with the following:

- Create a css file that follow the page design system inside figma
- Make sure all the content meets the same container as per design
- Make sure all the content and backgrounds are well adjusted for the following screen sizes:
  - 1920×1080 (Large Desktop)
  - 1366×768 (Desktop)
  - 768×1024 (Tablet)
  - 414×816 (Mobile)
- Add enter animations for some of the floating images in the design. As well as for the cards, form or images.
- Within the second section, the buttons should trigger a popup with the same form as the hero banner (extra points if you don't use bootstrap javascript for this).

### Deliveries:

- A Zip file with the html, CSS and Javascript files.
- Only build using Javascript, JQuery, CSS.

**Important Note:** Use bootstrap as your CSS framework and try to use as many bootstrap classes as you can. It also needs to look good and also functional.
